# 夾層混色射出機(FB-C) Sandwich/Interval Injection Molding Machine

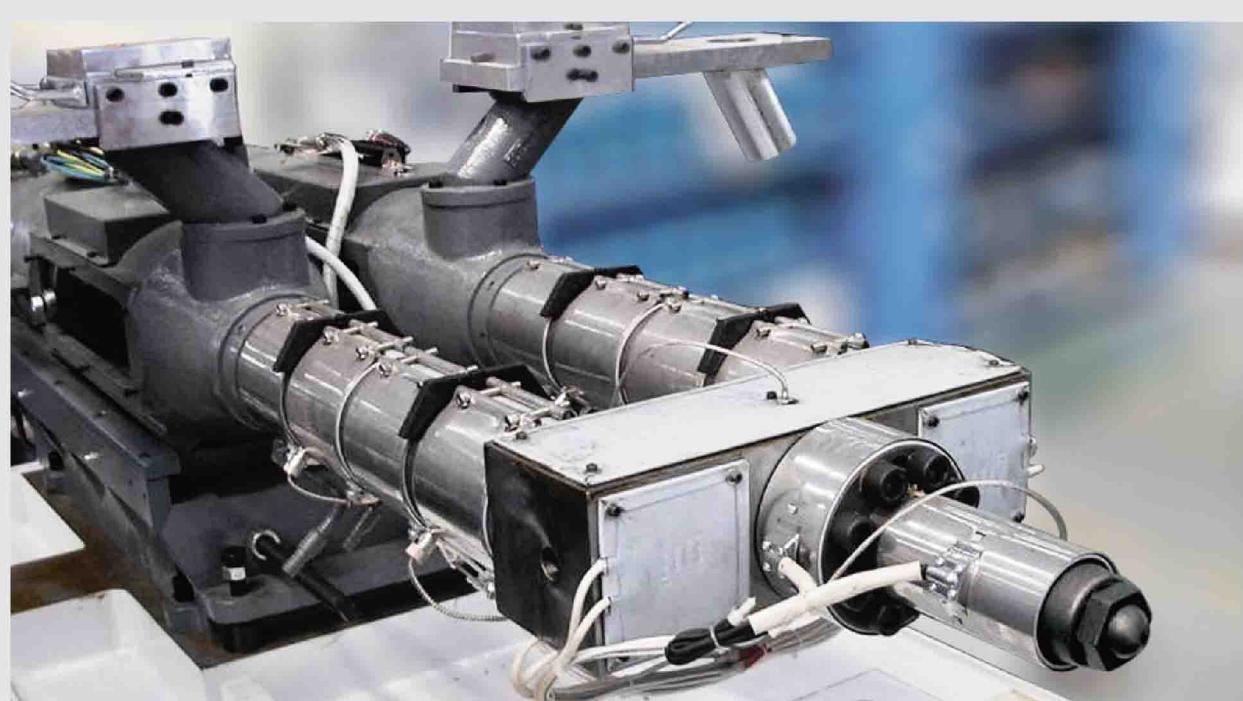

夾層射出成型是新近發展的創新射出成型加工技術，其操作方法是：在傳統塑膠射出成型機上增加一組複合式射嘴及料管組形成獨立的雙料管，在射出的過程中可以同時或間隔方式將兩種熔膠，透過共同射嘴射入模穴中達成雙料共射，其中外層的熔膠稱為皮料層，內層的熔膠稱為核心料。

塑膠加工廠在市場競爭壓力下，如何產生附加價值較高產品及降低成本，以維持廠商生存和發展為重要課題，富強鑫為協助廠商產業轉型及升級，經過多年之努力和研發，領先業界成功開發夾層混色射出成型機。

Sandwich injection molding is one of the newly developed injection molding methods. To accomplish such a molding method, an additional barrel is added to a traditional plastic injection molding machine to form an independent double barrel with special design nozzle, during the injection process, this double barrel can concurrently inject two types of molten plastic, via the same nozzle into the mold to achieve double material simultaneous injection. The outer layer of the mixed molten plastic is called the skin material, while the inner layer is called the core material.

## 夾層混色射出機(FB-C) Sandwich/Interval Injection Molding Machine

本機型搭配特殊設計之複合射嘴，在使用原有模具下，即可產生特殊花紋及多層次顏色，直接提升產品之附加價值，再造就模具的第二春，創造額外利潤。

By matched with special design nozzle, sandwich injection molding machine might produce the special flowered & multilevel colors, thus to create high values-added products while keeping the costs down and creating the additional profit.

夾層射出成型比起傳統的射出成型具有如下特色：

Sandwich injection molding has the following advantages over traditional injection molding:

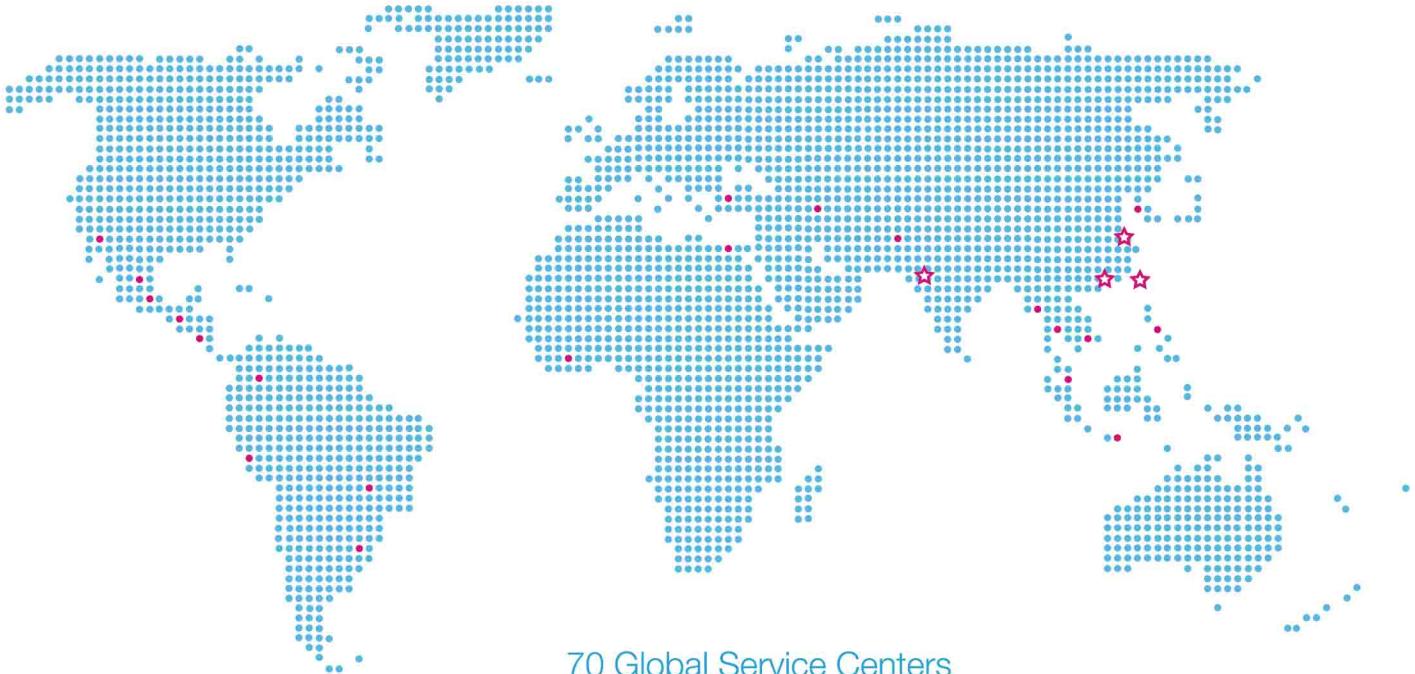

- 對內外層不同塑料之產品，可取代二次加工改為一次成型。 • For products with different outer and inner layer materials, the traditional two-step insert molding becomes one-step.
- 由於同顏色組合，可賦予舊品(模具)新生命。 • The different color combinations give old products(molds) new life.
- 核心料可使用低黏度之原料，降低射出壓力。 • Low-viscous materials can be used as core materials to reduce injection pressure.
- 本機型亦可用於生產單色產品，一機兩用，提供多元化功能及全方位服務。 • Sandwich injection molding machine can also produce single color which provides a multi-function and flexible molding method, increasing the processor's capability to produce high-quality and low-cost products.
- 核心料可使用回收之廢料或低品質原料來降低成本。 • Recycled and low-quality materials can be used as core materials to reduce production costs.
- 皮層料可採用優質具特殊表面性質或防電磁波干擾等材料，以增加產品功能性。 • High-quality materials with anti-magnetic interference properties and high surface quality can be used as skin materials to increase product utility.
- 適當的皮層料與核心料配合可以減少殘餘應力，增加產品強度。 • Appropriate core and skin material combinations can reduce the residual stress and increase product hardness.
